

A Math Lesson
by Bobbi Katz

P: When squares are absolutely round,
an inch is usually twice a pound.
So add two flubbers minus four
To get the answer less or more.
Precisely under twelve you'll find
Is fourteen over front behind;
The highest power frosted three,
equals twenty cups of tea!
To check your answer just proceed
The problem backward with great speed:
Tea-ish, me-ish, frosted three-ish,
Front-behinder, fourteen-finder,
Less-ly, more-ly, flubber-fourly,
Poundish, roundish, squarish, soundish.
Math as you can hardly see,
Is easy as a bumblebee!
